Skills

Languages & Backend: Java, Spring Boot, Spring Security, REST API Design, Microservices Architecture, WebSockets, JWT, OAuth 2.0, Maven

Databases: PostgreSQL, MySQL, MongoDB, Redis, Schema Design, Query Optimization, Data Modeling

Messaging & Streaming: Apache Kafka (self-hosted), Event-Driven Architecture, Topic Management

Cloud — Amazon Web Services: EC2, S3, RDS, ECS (Fargate & EC2), ECR, Lambda, ALB, Route 53, CloudWatch, IAM, ACM, WAF, Cognito, SNS, SES, Auto Scaling

Cloud — Azure: Virtual Machines, Network Security Groups (NSGs), Blob Storage, Azure Database for PostgreSQL (Managed)

Cloud — Vultr: Instances, Firewall Groups, Load Balancers, Block Storage, VPC Networking

DevOps & Infrastructure as Code: Docker, Portainer, Terraform, Ansible, Nginx, Linux/Ubuntu Server, Shell Scripting, Cloudflare Tunnel, Zero-Trust Networking, SSL/TLS

CI/CD: Jenkins (Master-Slave), GitHub Actions/Webhooks, GitLab CI/CD, Pipeline Design

Observability & Monitoring: Prometheus, Grafana, CloudWatch, cAdvisor, Node Exporter, Blackbox Exporter, Spring Boot Actuator

Tools: Git, GitHub, GitLab, Bitbucket, Jira, WinSCP, Postman, Claude Code (AI-assisted development)

Work Experience

Greatpelican Digital Systems, Hyderabad

Apr 2024 - Jul 2026

Software Engineer — Backend & Cloud Infrastructure

- **Delivered \$1,300+/month in infrastructure savings** by reducing AWS spend by **83% (\$1,200 to \$200/month)** through a hybrid on-premise/AWS architecture and migrating managed Kafka to self-hosted Apache Kafka.
- **Reduced deployment cycle time by 60%** by building Jenkins master-slave CI/CD pipelines with GitHub webhook triggers across Dev, QA, and Production, enabling fully automated production deployments.
- **Maintained 99.9%+ platform uptime** across 4 production platforms using CloudWatch alarms, automated self-healing scripts, Spring Boot Actuator health checks, and load-balancer traffic management.
- Designed and maintained production REST APIs using Java and Spring Boot for EV charging, travel expense, and payment platforms, supporting real-money transactions and frontend/mobile applications.
- Implemented OCPP 1.6J over WebSockets for real-time bidirectional communication between backend services and physical EV charging stations, enabling remote charging control and live session telemetry.
- Optimized a self-hosted, Dockerized PostgreSQL instance handling high-frequency writes from thousands of concurrent EV charging sessions, eliminating data-loss events and maintaining stable database performance under production workloads.
- Containerized application services using Docker and deployed workloads on AWS ECS (Fargate & EC2), supporting scalable and repeatable production deployments across cloud and on-premise environments.
- Secured production applications using AWS WAF, IAM least-privilege policies, MFA, SSH key-based authentication, and AWS Cognito with OAuth 2.0/JWT across multiple production applications.

Greatpelican Digital Systems, Hyderabad

Jan 2024 - Mar 2024

Software Engineer Intern — Backend & QA

- Designed and executed test cases for EV charging APIs, payment workflows, and user authentication, gaining hands-on experience with production backend systems.
- Contributed to Java Spring Boot REST API development beyond the internship scope, leading to conversion to a full-time Software Engineer within **4 months**.
- Self-taught AWS, Docker, and CI/CD fundamentals during the internship and applied them to production infrastructure and deployment workflows after transitioning to the full-time role.

Education

SRKR Engineering College, Bhimavaram

Aug 2019 - Apr 2023

B.Tech. in Computer Science and Engineering

CGPA: 6.57/10

Relevant Coursework: Object-Oriented Programming, Data Structures and Algorithms, Database Management Systems, Operating Systems, Computer Networks, Computer Architecture, Distributed Systems, Software Engineering, Web Technologies

Project Work

- **Chargebird — EV Charging & Payment Platform:** Developed Java Spring Boot/Maven backend services exposing REST APIs for frontend and mobile applications. Integrated Razorpay for one-time payments, recurring subscriptions, automated billing, and webhook-driven payment status handling. Built financial logic for per-kWh/per-session billing, operator revenue sharing, GST/tax calculations, and automated statement generation. Implemented automated PDF invoice and monthly statement generation with AWS SNS-based delivery.
- **CSMS — Charging Station Management System:** Developed a Java Spring Boot/Maven backend exposing REST APIs for frontend applications and OCPP 1.6J over WebSockets for real-time bidirectional communication with physical EV charging stations. Integrated self-hosted Apache Kafka for high-throughput EV session event streaming and Redis for real-time charger and connector status management. Maintained OCPP API documentation to accelerate third-party charger integrations.
- **Sandesh — Internal Email Microservice:** Developed a standalone Java Spring Boot/Maven microservice handling transactional email across 4 production platforms. Implemented JavaMail SMTP as the primary delivery mechanism with AWS SES as a failover provider, decoupling email functionality from consumer services and improving delivery reliability.
- **OCPI — EV Charging Roaming Interoperability:** Developed a Java Spring Boot/Maven backend with REST APIs for EV charging roaming and interoperability. Built OCPI integration between the company's Charge Point Operator network and external e-Mobility Service Providers to enable communication and data exchange across charging networks.

Achievements & Leadership

- **Silver Medal — High Jump:** Secured a silver medal in an inter-school high jump competition.
- **Gold Medal — Relay Race:** Secured a gold medal in an inter-school relay race as part of a 4-member team, with each team member covering a 400-meter leg.
- **Bronze Medal — Running Competition:** Secured a bronze medal in an inter-school running competition.
- **7th District Rank — Sir C. V. Raman Talent Test:** Secured 7th rank at the district level.
- **Jawahar Navodaya Vidyalaya:** Qualified the selection process and secured admission.
- **Supernova 2K23 — CSE Department:** Participated in and assisted with organizing the CSE department's Supernova 2K23 event, supporting cultural activities, photography competitions, celebrations, and event management.
